

# STUDENT hANDOUT FOR *SCHOOL OF ROCK-Cont'd*

<b>Slate</b> Initial mass:	1	
	2	
	3	
	4	
Final mass:	5	
<b>Limestone</b> Initial mass:	1	
	2	
	3	
	4	
Final mass:	5	

Based upon your observations, which rock types did the rough materials scratch the most?

Was there a change in mass and appearance of any rocks after they were exposed to the acid for several days? If so, list which rocks experienced these changes.

Based on your observations, which rocks best resisted both physical and chemical weathering?  
Which rocks will you use for your rock garden?
